

# How to Create a Wallet in Trust Wallet and Store Bitcoin from Pluang

## Introduction

What is Trust Wallet? Trust Wallet is a non-custodial crypto wallet application, which means the user holds their own private keys. And what is Pluang? Pluang is an investment platform that provides access to various assets, including cryptocurrencies such as Bitcoin. It also offers other assets like US stocks, mutual funds, gold, and more.

The reason you might want to transfer Bitcoin from Pluang to Trust Wallet is because holding Bitcoin in your own wallet is more secure, and you have full control over your assets.

## Part 1: Creating a Wallet in Trust Wallet

1. Download the Trust Wallet app from the Play Store, App Store, or another source.
2. Open the app and select "Create a new wallet."
3. Set your password or PIN.
4. Save your recovery phrase, usually 12 words. Write it down securely and never take a screenshot, because losing these 12 words means losing access to your wallet.
5. Verify the recovery phrase.
6. Your wallet is now ready.

## Part 2: Transferring Bitcoin from Pluang to Trust Wallet

1. Open the Pluang app.
2. Tap the wallet icon (balance menu) at the bottom.
3. Select Bitcoin and go to the "Send" menu.
4. Tap the "Send" button.
5. Choose the correct network (make sure it matches the Bitcoin network).
6. Paste the recipient wallet address you copied from Trust Wallet.

7. Enter the amount of Bitcoin you want to transfer.
8. Double-check all transaction details.
9. Tap “Confirm” and enter your Pluang PIN code.
10. Wait for the confirmation process. Once the transaction is complete, the Bitcoin will appear in your Trust Wallet.

## **Conclusion**

Bitcoin transactions require blockchain confirmations, so don't panic if it doesn't arrive immediately. Always keep your Trust Wallet recovery phrase safe, because it's the only way to restore access to your wallet.
